## In order to maximize installation flexibility, 4 types of control systems are offered

### Z-Control (EKEQDCB / EKEQMCBA)

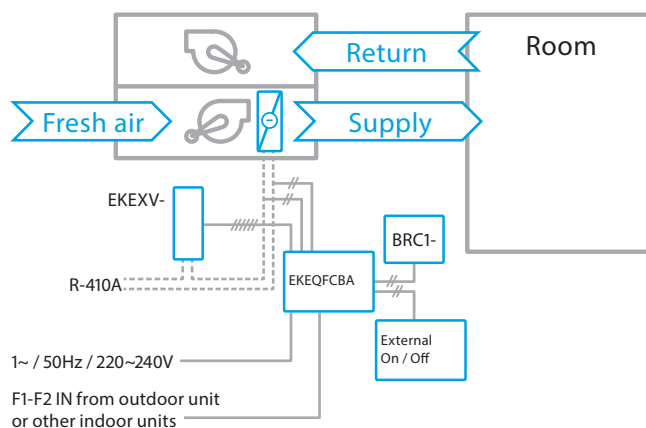

Capacity control based on Room or Return air temperature and set-point set via remote controller. The actual Supply (Discharge) air temperature can not be controlled – hence may not be suitable in fresh-air applications, if there are other heating / cooling sources in the air conditioned space.

Input	Input value	Effect
Remote On/Off input	Closed contact	System is turned on
	Open contact	System is turned off

### Y-Control (EKEQFCBA only)

Capacity control to maintain constant evaporation (Te - in cooling) / condensation (Tc - in heating) temperature. Temperature to maintain is configured via service setting (not end-user controllable) in range of Te = 5~12°C, Tc = 43~49°C. An external system should give an On/Off command signal.

Input	Input value	Effect
Remote On/Off input	Closed contact	System is turned on
	Open contact	System is turned off

### X-Control (EKEQFCBA only)

Capacity control by external DDC / PLC via a 0~10VDC analogue input signal. The analogue input signal controls capacity by changing the evaporation (Te - in cooling) / condensation (Tc - in heating) temperature in ranges up to Te = -7~20°C, Tc = 30~55°C. Very precise temperature control can be realized this way.

Input	Input value	Effect
Capacity control analogue input	<3V ... Te increases / Tc decreases every minute	Supply air gets warmer every minute
	5V ... system maintains current capacity	Supply air temperature stays at same value
	>7V ... Te decreases / Tc increases every minute	Supply air gets colder every minute
Remote On/Off input	Closed contact	System is turned on
	Open contact	System is turned off

### W-Control (EKEQFCBA only)

Capacity control by external DDC / PLC via a 0~10VDC analogue input signal. The analogue input signal linearly controls capacity in 5 capacity steps, by changing the evaporation (Te - in cooling) / condensation (Tc - in heating) temperature in ranges of Te = 6~13,5°C, Tc = 31~46°C. The control logic allows to use commercial off-the-shelf DDC controllers without the need of reprogramming.

Input	Input value	Effect
Capacity control analogue input	0~1,5V: OFF	
	1,5~3,5V: Te = 13,5°C / Tc = 31°C	Approximately 40% capacity
	3,5~6,5V: Te = 11°C / Tc = 36°C	Approximately 60% capacity
	6,5~8,5V: Te = 8,5°C / Tc = 41°C	Approximately 80% capacity
	8,5~10V: Te = 6°C / Tc = 46°C	100% capacity
Remote On/Off input	Closed contact	System is turned on
	Open contact	System is turned off

## Daikin Service Portfolio

Saving energy doesn't stop with the purchase or installation of energy-efficient equipment; it has to be kept running under optimum conditions.

Good maintenance and servicing are key elements in ensuring the maximum performance.

**Are you sure the filters are clean and none of the components are defective?**  
**Are all of your settings correct?**

Any of these things may lead to a reduced level of comfort. And while you may not notice the difference right away, you will certainly notice it at the end of the year – when you pay your energy bill.

Our Daikin design team is constantly striving to improve the energy efficiency of our systems.

We at Daikin Service are here to support you in keeping your units up and running efficiently by means of optimised commissioning and start-up, regular and preventative maintenance, remote monitoring, improving the performance of units, and providing cost effective upgrades to benefit from the efficiency gains from our latest state of the art technology.

To guarantee your Daikin unit efficiency and long term performance, Daikin offers the **professional start-up of your Daikin system** by highly qualified, OEM educated engineers as part of the commissioning services.

Commissioning through an authorized Partner or by Daikin itself assures you that your unit is working as it should and is delivering all the benefits of a unique climate.

Every commissioning is documented as per Daikin standard and a detailed commissioning report is provided, detailing all activities done and recording the functioning of the units.

The prices listed are based on completion of the Pre-Commissioning checklist which covers a range of core activities including the general conditions at the site, provision of power and the required electrical distribution as well as installation related topics. This ensures that the service can be provided efficiently, on time and giving the best results. ## Maintenance

Maintenance is the key element to ensure the quality, efficiency and flawless operation of any asset. Our Care agreements are based on years of experience to ensure you reap the full benefits of having Daikin Certified engineers maintain your equipment. Preventive maintenance and regular service is a key component in securing your investment. Dust, temperature, humidity and load degrade the reliability and performance of a VRV system over time.

Regular maintenance of a unit or system ensures that electricity costs and performance are not jeopardized, and that the safety features and the entire system are in line with the latest standards and regulations.

**Regular care** safeguards your investment for the full lifetime of the Daikin System.

Downtime and failures are avoided, while keeping operating costs low, as they should be throughout the entire system lifecycle. **Preventive care plans** give you cost transparency avoiding

unexpected repair costs or degradation of comfort, quality or production loss.

Daikin Cares contains 3 different levels of maintenance agreements catering to your every need. In addition to these 3 Care packages Daikin offers a comprehensive set of options you can choose from.

Data is our raw material, and data analytics is our product. The continuous monitoring and analysis of a system's operating data is not only the key to ensuring efficient operation, cutting operating and maintenance costs and optimizing user comfort. Data analysis also provides further valuable and often surprising insights.

### Hassle-free connection

We know that connecting a system to the cloud can often be a real challenge – but that's no longer your problem. We'll take care of the connection, including the mobile network and the router, both of which are remotely monitored to maximize infrastructure reliability.

### Daikin Cloud Service

Our web-based service provides reliable and secure remote monitoring. Our top priority is to earn your trust. Daikin Cloud Service meets the highest security standards in all respects – safeguarding your data privacy as well as transporting and storing your data securely at all times.

## The benefits of remote monitoring

### Remote Monitoring or control

Daikin Cloud Service is a web-based remote monitoring and control solution for HVAC systems that can even manage the energy consumption of several buildings at once. There's no need to install any special software. Everything is accessible using a standard browser, whether via a computer or a mobile device.

### No potential problem goes unnoticed

What's more, Daikin Cloud Service provides automatic notification if it detects a possible malfunction. This unique predictive notification feature enables service measures to be initiated even before the user notices that a problem has arisen – thus maximizing reliability and minimizing service costs.

### Maximum performance

The performance of even the best system can be impaired if it is not properly operated. Continuous monitoring allows load profiles, usage patterns and operating conditions to be closely followed. The data obtained is the basis for optimizing a system's operation and maintenance as well as its return on investment.

## Real case

Real life examples, how continuous monitoring and data analysis could be useful:

**-20%**

### Lower VRV consumption

Thanks to analysis of the VRV systems energy consumption data, we could provide the recommendation, how to change the usage pattern. The result was 20% reduction of electricity costs for cooling and about 15% in heating.

**30%**

### Higher outlet temperature

Thanks to operation data analysis, we identified the possible comfort issues. Following operation assessment provided the base for taking the countermeasures to increase their comfort.

**40%**

### Spare refrigeration capacity

Long term monitoring of the Conveni pack, identified that the client has a 40% spare refrigeration capacity. This allowed to reduce the number of installed devices and thus save the investment costs.

**-20%**

### Lower investment costs

Operation data analysis of the old VRV system confirmed, that the replacement capacity and system layout could be optimized. This allowed to decrease investment costs of the replacement system and to resolve comfort issues.

## Used abbreviations and nominal conditions

- 1.) Used abbreviations:  
AHU ... Air Handling Unit  
IU ... Indoor Unit  
OU ... Outdoor Unit  
HRV ... Heat Reclaim Ventilation  
MFA ... Maximum Fuse Amps - The capacity of the circuit breaker or fuse securing the unit must not exceed this value  
MCA ... Minimum Circuit Amps - The power supply wiring must be dimensionned (cross-section) for at least this value according to local and national legislation

- 2.) Nominal cooling capacities are based on following conditions:  
Standard indoor units: – indoor temperature 27°CDB / 19°CWB – outdoor temperature 35°CDB – refrigerant piping length: 7,5m – level difference: 0m  
LT Hydrobox: – leaving water temperature 18°C – delta T 5K – outdoor temperature 35°CDB – refrigerant piping length: 7,5m – level difference: 0m

Nominal heating capacities are based on following conditions:

Standard indoor units: – indoor temperature 20°CDB – outdoor temperature 7°CDB – refrigerant piping length: 7,5m – level difference: 0m:

LT Hydrobox: – leaving water temperature 35°C – delta T 5K – outdoor temperature 7°CDB/6°CWB – refrigerant piping length: 7,5m – level difference: 0m  
HT Hydrobox: – leaving water temperature 45°C – delta T 5K – outdoor temperature 7°CDB/6°CWB – refrigerant piping length: 7,5m – level difference: 0m
